Profile :

High school student at SMK Telkom Malang, majoring in Software Engineering who is able to build static and dynamic websites using React JS, Blade, Laravel, Node JS and Django. I also master Data Analytics using pandas. Creative in using various UI component such as Blade Laravel Tailwind and Bootstrap. Experienced in programming, economics, and business, with strong leadership skills. A creative thinker who excels in developing innovative solutions to challenging problems.

Education :

SMK Telkom Malang   July 2022- June 2025

I am a 5th semester Software Engineering student at Telkom Sandhy Putra Malang Vocational School, specializing in website development. I have spent two years focused on Frontend (React.js) and Backend (Node.js) development. Currently, I am developing my skills by learning Laravel/PHP and actively participating in business planning and UI/UX competitions.

Project Experience :

UKL (FrontEnd)   April 2024

Designed and developed a user-friendly, visually appealing and responsive graphical user interface (GUI) for a cafe website. The project was built using React.js and Tailwind CSS for styling, ensuring a modern and smooth user experience.

TA e-commerce franchise (FrontEnd)   May 2024

Led the development of a scalable and user-friendly franchise e-commerce platform using Vite.js for fast and efficient bundling. Integrated Bootstrap components to achieve a responsive and consistent UI design.

StoryBook (FrontEnd)   June 2024

Designed and developed a scalable library of UI components using Atomic Design methodology. Created components and organized them into pages, documented with Storybook, and created with TypeScript.

Profile Web (FrontEnd)   July 2024

Designed and developed a personal website profile using React Vite TypeScript as the frontend framework, with styling powered by Tailwind CSS. The design was further refined by combining MerakiUI and Aceternity UI component, which provide a clean, modern, and responsive user interface. I also published this website using Github.io.

UKK (Wikusama Cafe), proses Kasir, Admin dan Manajer :   October 2024

Create a fullstack web using Node JS backend and React Vite JS frontend assisted by Tailwind CSS + Meraki UI and Daisy UI component.

Web Profile Mahes (Frontend React Vite JS) (paid) :   October 2024

Designed and developed a personal website profile of a friend (this project is paid though a little), using React.js as the frontend framework, with styling powered by Tailwind CSS. The design was further enhanced by incorporating the MerakiUI component, which provides a clean, modern and responsive user interface. I also published this website using Github.io.

Web Profile NurArdiansah (Frontend React Vite JS + PWA) (paid) :   October 2024

Designed and developed a personal website profile of a friend (this project is paid though a little), using React.js as the frontend framework, with styling powered by Tailwind CSS. The design was further refined by incorporating the MerakiUI component, which provides a clean, modern and responsive user interface. I also published this website using Github.io and implemented PWA.

Website Barberinaja | Booking Barber (Fullstack) Laravel :   January 2025

Developing an online barber service booking application using Laravel PWA (Progressive Web App) with Filament and Livewire integration. Responsible for creating booking features, schedule management, and responsive interfaces for users and admins. Implementing the PWA concept to improve user experience with offline access and fast performance.

[All my projects can be seen in more detail in my portfolio](#)
